Resupatch is a two-pack easy to use epoxy resin mortar, with excellent mechanical properties. This makes it ideal for rapid repair of concrete surfaces in heavy duty environments.

**ADVANTAGES**
- Hard wearing durable repairs for Industrial Use
- Ease of application
- Minimum surface preparation
- Can be feather edged
- Excellent abrasion and impact resistance
- Concrete like in appearance
- Dust-free

**RECOMMENDED USES**
- Any sound concrete requiring repairs
- Warehouse areas
- Chemical production and storage
- Printing and packaging areas
- Engineering facilities
- Automotive industry
- Aerospace production areas
- Industrial workshops

**Specification**

Product: Resupatch

Finish: Textured Grey Finish

Thickness: As required

Colour: Flint

**Products required for this system**

Prime: Resuprime

System: Resupatch

Surface Seal: Any Sherwin-Williams / RSL resin floor system

**Preparation**

**New concrete floors:** Must be clean, sound, dry, fully cured and surface lathes removed by vacuum enclosed shot blasting, scarifying or mechanical grinding. Fats, oils or greases must be removed by mechanical means and detergent washing and make sure all residue detergent is washed and removed by rinsing with clean water.

**Existing floors (previously coated):** All previous coatings and loose floor paints must be removed by mechanical preparation as described in the above section and primed as specified. If the old resin flooring cannot be removed, then please consult with our technical team for advice on intercoat adhesion and suitability as it may not be compatible with existing floor coating. Where overcoating other systems such as epoxy coatings or screeds, as part of a specified composite system in the data sheets, please follow the recoat time as stated in the individual data sheets, the coating in each stage should be tack free, but not fully cured. If fully cured then mechanical preparation is required to ensure intercoat adhesion.

**Priming**

Open and porous substrates may require priming with Resuseal VF, also Resuprime NT may be used as primer on dry substrates only with less than 75% ERH reading. Where the Relative Humidity of a substrate exceeds 75% ERH RS Dampshield FH should be specified and selected on the basis of hygrometer readings in accordance with BS 8203.

The number of coats to be applied is chosen in accordance with the following table:

<table>
<thead>
<tr>
<th>ERH % Required Coating Thickness</th>
<th>75-85 1 coat of R.S. Dampshield FH at 200 microns per coat</th>
<th>85-92 2 coats of R.S. Dampshield FH at 200 microns per coat</th>
<th>92-97 3 coats of R.S. Dampshield FH at 200 microns per coat</th>
</tr>
</thead>
</table>

For further information please refer to recommended individual product data sheets.

**Application**

The ambient temperatures of the areas should not be allowed to fall below 15°C throughout the application and the curing period, as this could have an adverse effect on the appearance and colour of the system. Surface temperature must be above 10°C. Where possible it is recommended that the application area is heated to a minimum temperature of 15°C ideally to allow the ambient and substrate temperature to stabilise prior to installation. Mixing: Pre-mix the coloured base component to a uniform consistency then mix the entire contents of the base with the hardener. If a separate mixing bucket is being used mix thoroughly ensuring all contents of both components are removed from the buckets supplied. Add the aggregate component slowly whilst mixing. Mix using an electric mixer for approximately two to three minutes until the three components have fully combined. For larger units a forced action mixer may be required to fully combine the aggregate into the resins. Resupatch should be worked with a trowel or float to achieve a dense, compacted finish. This is best achieved by the application of smooth even pressure in one direction, gradually increasing the pressure as the material compacts and beds down. Over-working the material will draw fines to the surface which may result in resin-rich spots and finish variations.

The surface should be protected from temperatures of less than 10°C and moisture in the early stages of cure. Resupatch can be sealed using a variety of seal coats listed in the Sherwin-Williams / RSL range of products.

**Category Guide**

FeRFA Category: 6

**Technical Information**

The following figures are obtained from laboratory tests and our experience with this product.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Slip Resistance</td>
<td>Dry: &gt; n/a, Wet: Please consult RSL</td>
</tr>
<tr>
<td>Abrasion Resistance</td>
<td>n/a</td>
</tr>
<tr>
<td>Temperature Resistance</td>
<td>Tolerant of sustained temperatures of up to 60°C</td>
</tr>
<tr>
<td>Chemical Resistance</td>
<td>Good chemical resistance, Consult RSL for further details</td>
</tr>
<tr>
<td>VOC</td>
<td>48 g/l</td>
</tr>
<tr>
<td>Life Expectancy</td>
<td>6 years plus, Subjected to Industrial Traffic RSL terms and conditions will apply</td>
</tr>
</tbody>
</table>

**Maintenance and Cleaning**

Sherwin-Williams recommend that Resupatch should be cleaned with a regular industrial cleaning regime with a floor scrubber utilising R.S. Industrial Floor Cleaner or similar with dirty water being removed. Isolated localised cleaning can be carried out using R.S. Tyre Mark Remover, R.S. Fats and Grease Remover & R.S. Oil Remover. All surfaces should be thoroughly rinsed with clean water after the use of chemical cleaners. Please refer to the RSL Guide to Cleaning of Resin Floors.

**Health and Safety**

Resupatch is formulated from materials designed to achieve the highest level of performance as safely as possible. However, specific components require proper handling and suitable equipment, this information is given in the relevant safety data sheets. In all cases, spillages or skin contamination should be cleaned as soon as practically possible, by dry wiping of the affected area, and thorough washing with soap and water.

The information given in this data sheet is derived from tests and experience with the products and is believed to be reliable. The information is offered without guarantee to enable purchasers to determine for themselves the suitability of the product for their particular application. Any specification or advice given by Resin Surfaces Limited or its agents is based on the information supplied by the purchaser. Resin Surfaces Limited cannot be held accountable for errors or omissions as a result of that information being incorrect or incomplete. No undertakings can be given against infringement of patents. Some materials are derived from natural sources. As such some variation may occur. Site conditions may also contribute to variation in finish and colour.
